

TORK PREMIUM HAND TOWEL INTERFOLD SOFT

Article #	100288
System	H2-Interfold System
Benefits	Soft
Ply	2
Color	White
Print	Yes
Unfolded length	34.0 cm
Unfolded width	21.2 cm
Folded length	8.5 cm
Folded width	21.2 cm

COMPATIBLE PRODUCTS

Tork Dispenser Hand Towel Interfold (301080)

Tork Dispenser Hand Towel Interfold Mini (303080)

Tork Dispenser Hand Towel Interfold Aluminium (451000)

Product Features

Engineered for highest functionality

Larger and more absorbent towels: lower usage and maintenance costs

Top-quality tissue: quick and effective hand drying

Ready to use: hygienic and convenient

Chemical Pulp

Chemicals

Material

Chemical pulp

Chemical pulp is produced either from softwood or hardwood. The wood chips are boiled together with chemicals and the major part of the lignin is removed. Chemical pulp is bleached in order to achieve a clean, bright and strong product, but also to increase the hygienic and absorbent qualities. There are two major bleaching methods: ECF (elementary chlorine free) and TCF (totally chlorine free). ECF is based on oxygen, chlorine dioxide and hydrogen peroxide. TCF is based on hydrogen peroxide and ozone.

Chemicals

Both functional and process chemicals are used. The main functional chemicals are wetstrength and drystrength agents, dyes and softeners. The wetstrength agent is a polyamide (from polyamidine/epichlorhydrinepolymer) with a very high affinity to the fibre, which gives the product its high wetstrength. Process chemicals are retention agents, creping agents, defoamers, coating agents, nutrients, pH-regulators, cleaning agents, releasing agents and flocculation agents. No dyes are used.

Production

This product is produced at Kostheim mill, Germany, and certified according to ISO 9001:2000, ISO 14001 and EMAS.

Deconstruction

This product is mainly used for personal hygiene and can be collected together with household waste.
